

Customer needs:

I need to talk to an LLM and get answers to my questions. I would like to keep my conversation history so I can view and search it. I also want to continue my previous conversations.

New: for new features, the development team works in a new branch, then submits pull requests (PRs) once the features are tested. The testing team needs to review the PR and ensure the new features pass the required tests before merging. The requirement team needs to keep track of the mapping between features and PRs in a change log.

Change log format: create a text file in the repository with the name of change.log.

Sample change log:

Feature 4: Save conversation history. [PR 3](link to PR3)

Feature 5: Search conversation history. [PR4](link to PR4)

Role Requirements:

Requirement Team:

- Group GitHub creation
- Write down user stories
- Lo-fi UI sketches
- CI/CD setup

Development Team:

- Software Architecture
- Develop code
- Unit tests with Jasmine

Testing Team:

- PR Review
- Acceptance tests with Cucumber
- [Cucumber.js](#) and Puppeteer (or other automated Browser tool or AI testing tools)

Submission:

Iteration 2 has three submission deadlines.

- Mar 23 for the requirement team
- Mar 30 for the testing team
- Apr 9 for the Iteration 2 report

The submissions on Mar 23 and 30 are only for check-in. Feel free to submit draft reports. The goal is to get each team started on time. Grades will be done on the Iteration 2 report.

Iteration 2 report should include

1. Role Assignment of each team member
If you don't have a role assigned, the grade for this iteration will be 0
2. User Stories and Features – 20%
 - a. Minimum of three user stories/features
 - b. Estimation of points for each feature
 - c. Selection of features for Iteration 1
3. UI Design – 10%
 - a. How many pages are there in the project
 - b. How does a user interact with the pages and transition between pages
4. Unit Tests and Acceptance Tests – 30%
 - a. Document the procedure of deriving acceptance tests from use cases and scenarios (using Cucumber.js)
 - b. Document how test suites and individual tests are designed (using Jasmine)
 - c. Document how each use case/scenario is implemented via completion of a series of unit tests
 - d. You can point to the test cases in the code repository or paste test code in the document.
5. Software Architecture and Implementation – 30%
 - a. REST API Design
 - b. Routing Table
 - c. Database Design

Automated Testing Demo (1 min) – 10%

1. Video recording of Puppeteer or similar tools
2. Upload the video of the screen recording

Grading Rubrics

- Requirement Team
 - Number of use cases and scenarios
 - SMART. Specific, Measurable, Achievable, Relevant, Timeboxed
 - Points estimation for each feature
 - UI Design
 - CI/CD setup for coding style using ESLint (using the command line)
- Development Team
 - Number of features implemented
 - Unit tests and Unit tests are implemented before coding
 - The process of iterating over passing unit tests, then acceptance tests
 - REST API routing table
 - Database design
- Testing Team
 - Acceptance tests generated by [Cucumber.js](#)
 - Organizing individual tests into test suites

- Setting up Puppeteer or another automated browser testing tool
- Record the automated browser testing tool demo (1 min)
- GitHub interactions using GitHub issues
